

BREAKING NEWS FROM OUR CEO, DR WAN M. HASNI

FARAD TO BURN ITS TOKENS TO INCREASE VALUE

On behalf of the FARAD Community, I would like to announce and inform that the total supply of FRD tokens is now set at 200,000,000.

The balance of 1,400,000,000 FRD tokens, which were not distributed, have been burnt.

After the closing statement of the FARAD Program, the team has heard the concerns of the community on the remaining FRDs and has taken them into serious consideration.

I would like to put all doubts to rest on the tokens' destination.

After much deliberation, the team has decided to burn the tokens through a wallet without a private key, making the tokens inaccessible and unavailable to be used forever.

The wallet address is 0x0001.

This will also put to rest any concerns whether the supply of FRD tokens will increase in the future and is part of the transparency process of the blockchain system.

Furthermore since there are less tokens up for trade, the tokens that are available will become more valuable.

Hence, this is a way of rewarding the contributors for their continued support.

Finally, I would also like to assure that the rest of the FARAD Program is continuing smoothly according to plan and we will keep the community updated on the progress.

Stay tuned for updates on the FARAD ecosystem on our social media platforms as well as the FARAD website, www.farad.energy.
